

Atlanta Crime Analysis

Group # 3

Group members:

1. Caroline Larry
2. Harsha Vinoy
3. Tianyue Yang
4. Viera Garcia
5. Chithra Sundaram
6. Jennifer Gaddie
7. Ricardo Benitez

Description:

Analyze Atlanta crime data from 2009 to 2019 and 2020 to 2021 to identify crime patterns or trends based on different locations in Atlanta. Use Machine learning to predict different situations for crime occurrence in Atlanta from 2009 to 2019. Provide visualizations for crime occurrences from 2020 to 2021.

- Need housing data for Atlanta - zip code level
- Need Demographic/population data - zip code level
- Need zipcode based on lat/ln

Proposal:

Create a database that cross references crimes, demographics, and housing cost locations in Georgia and use an ML model to predict the probability of crimes in a particular area at a particular time of day.

We will present the details in a website using HTML/CSS/Javascript, and include the interactive ML model.

Data Visualization ideas:

1. Count of crime
2. Atlanta Map - zip code level

3. Rate of crime by the hour
4. Alcohol consumption and total crime
5. Count of crime category by year

Machine Learning ideas/options: Atlanta Crime Data 2009 - 2019

- Time vs occurrence of crime - Correlation

Structure/Tools:

1. Data cleaning
 - a. Jupyter notebook/Pandas
2. Database
 - a. MongoDB
3. Flask App
 - a. Json link
4. HTML/CSS/Bootstrap
 - a. Webpage
5. Visualizations:
 - a. Plotly - JS
 - b. Tableau
6. Machine Learning
 - a. Collab
7. Heroku:
 - a. Launch website - connect everything

Process:

1. Define the roles for the team
2. Pull the data
3. Clean the data
 - a. Filter out months
 - b. Drop unnecessary columns
 - c. Format data(dates)
4. Website will include:
 - a. Homepage
 - b. Page to house the ML model
 - c. Map
 - d. About the team page
5. Machine learning:
 - a. Receive input from user
 - b. Predict situation
